Greens originally began in 1935 in Hamilton, turning its hand to tapware in the late 1970s. Today, Greens Global Limited is a privately owned New Zealand company, with its head office based in Hamilton, New Zealand.

In the last decade we have moved from traditional manufacturing to a strong emphasis on Design, Engineering and Development of our products. Greens tapware is designed in New Zealand and produced using carefully chosen material so that we can provide the best quality and service to our customers.

We design and distribute tapware and showers under the Greens Tapware brand to both local and international markets including NZ, Australia, the UK and the USA.

NEW ZEALAND DESIGNED & ENGINEERED

EST. 1935

Beautiful Design

Our products are designed for the modern lifestyle - to inspire you to create an incredibly functional and desirable space.

New Zealand innovation

Innovation is a key characteristic Kiwis are renowned for. Through constant research and development, we focus on delivering technologies that deliver both form and function for every situation.

High quality and performance

Our products meet the highest demands in terms of design and quality. Greens is an ISO 9001 certified company. Our products meet international quality standards including the Australian and New Zealand standard mark.

GREENS

where life meets water

At Greens, we understand water.

At Greens, we understand water. We understand about water pressure. We understand that water is a scarce resource. We understand that each market we operate in has specific standards and requirements about the products that deliver water. Most of all we understand that in many ways we are all connected by water.

Greens Products - Water Pressure Guide

Please check that you are buying the right taps or showers. Greens have a solution for all water pressure situations. It pays to check every time so you don't buy the wrong tapware.

Alongside each Greens product you will find one of these symbols. This denotes the performance of the product in various pressure environments. Look for the symbols to make it easy for you to identify which one best suits your requirements.

MP - Products are suitable for mains pressure only (high pressure from 150kPa - 500kPa)

AP - Products are suitable for all pressures (from 35kPa)

FB - Shower Mixers including the FloBOOST® technology are suitable for all pressures (from 10kPa unequal | 20kPa equal).

Water Efficiency Labelling Scheme (WELS)

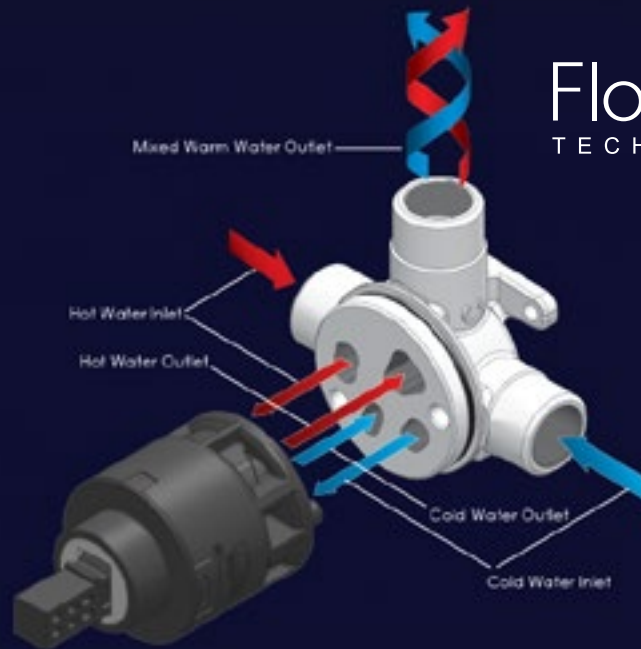

We take our environmental responsibility seriously. The Water Efficiency Labelling Scheme (WELS) is designed to provide information through labelling at the point of sale, to consumers buying the products that use water. The purpose of the label is to help consumers choose products that use less water but still provide a satisfactory level of quality and performance. More information can be found at <https://www.mfe.govt.nz>.

Water connects us all. It informs and inspires us and it energizes our relationship with life.

At Greens we understand this. We understand that identifying what type of water pressure you have in your home is vital when deciding on tapware and shower products. No matter where you live, what your lifestyle, or your water pressure, Greens products use technology specifically designed for both form and function to inspire you to create an incredibly functional and desirable space.

GLINT

The modern lines of the Glint bathroom range take on a bold, contemporary flavour, while striking curves bring a familiarity and softness to any space. Glint showers feature the new AirFlo™ shower technology which pulls air into the handset and then mixes that air into the water stream, filling the water droplets with tiny bubbles to create a wonderful invigorating spray.

PRODUCT CARE & MAINTENANCE

Maintenance of the finish of your tapware is important. Here are a few simple tips to follow:

Tapware surfaces should be cleaned with a soft damp microfibre cloth using water with mild liquid detergent, then wiped dry with a clean soft microfibre cloth to avoid water spots.

Do not use cleaning agents containing a corrosive acid or scouring agent, as well as cream cleaners (they are abrasive), as they may damage the surface which can void your warranty.

Stainless Steel 304

Stainless Steel 304 is suitable for most outdoor installations but not in coastal areas. Stainless steel surfaces should be cleaned weekly with liquid detergent and water, then sprayed with fresh water and then wiped dry. If water spots accumulate on the surface, clean by applying a 50/50 solution of water and white vinegar, spray with fresh water and then wipe dry.
