MICRO-QUARTZ

Micro-Quartz is a highly versatile, fully waterproof coating, which is suitable for a wide range of horizontal and vertical applications. Commonly specified for bathrooms, wet rooms, walls, floors, and worktops in both residential and commercial environments.

Micro-Quartz is available in three separate grain sizes, Smooth, Medium, and Coarse. Each range can be applied in several styles and techniques, each with its own unique aesthetic. Once applied, all styles can be finished in either 'Matt' or 'Diamond Polished' sheen levels.

SHEEN LEVELS EXPLAINED

Matt – High level of stain resistance, but more susceptible to scratching under point loads. Matt is commonly specified in bathroom environments for its low sheen aesthetic. Renewal of a matt surface requires sanding and re-coating of the sealer surface.

Diamond Polished – The dense, highly refined surface is extremely resistant to abrasion and scratching (MOH 7.5). However, a polished finish will stain easier if chemicals or strong colours are left on the surface for prolonged periods. Renewal of a diamond polished surface is much easier and only requires re-buffing.

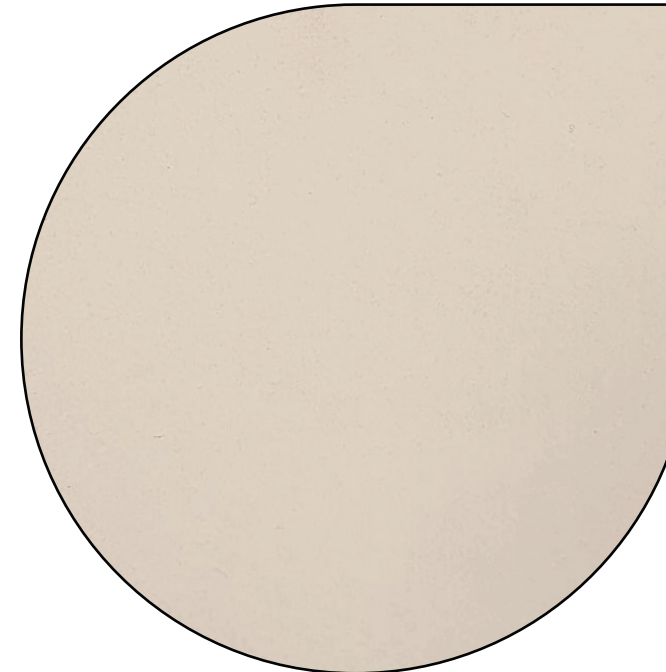

Need a bespoke colour? we can also colour match to RAL, Pantone, NCS and many high-end paint manufacturers colours.

Smooth

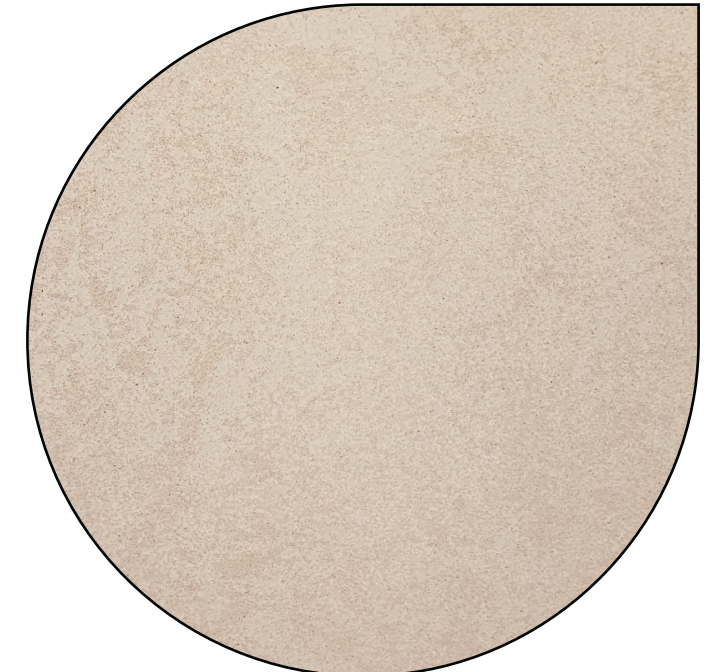

Micro-Quartz (Smooth) – Plaster Effect finish with an extensive variety of application styles such as; Stucco Effect, Smooth Over Coarse, Duo Colour, Light texture and Plain / Natural. No visible grains, suitable for walls, bathrooms, and low traffic floors. Perfect for creating a minimalist design.

Medium

Micro-Quartz (Medium) – Understated, simplistic finish with subtle tones and minimal movement. Available in a wide range of application styles, such as; Plain / Natural, Light texture, Stucco Effect and Duo Colour. Micro-Quartz (Medium) is suitable for walls, bathrooms, and medium traffic floors.

Coarse

Micro-Quartz (Coarse) – Highly durable, large grain, natural stone finish. Suitable for high traffic walls, floors, and bathrooms. Micro-Quartz (Coarse) can be heavily sanded so that it is smooth to the touch or lightly sanded to aid non-slip properties. Most commonly applied in 'Hand Floated' or 'Duo Colour' technique.
